\*All varnish contains a material that binds the fluoride to the tooth surface. **Rosin**, formerly called **colophony** or **Greek pitch** (*Pix græca*), is a solid form of [resin](#) obtained from [pines](#) and some other [plants](#), mostly [conifers](#), produced by heating fresh liquid resin to vaporize the volatile liquid components. It is semi-transparent and varies in color from yellow to black.

\*\* Vanish Varnish from Omnii/3M ESPE is available without the colophonium resin. Omni claimed that some people are allergic to colophonium and this offers an alternative.

## Fluoride Varnish Manufacturers and Supply Companies

Note: We do not endorse any specific varnish.

It also has a total of 0.5 ml in each unit dose container and the provider would use a dispensing guide to use the desired amount (e.g., 0.25, 0.4, or 0.5 ml.) Since it is a unit dose intended for one person, the amount not used is wasted.

\*\*\*Note: All product manufacturers have application instructions and material safety data sheets (MSDS) available on their websites or available upon request. We recommend that you read them before you make a purchase, and share post-application instructions for patients/caregivers with your staff 'varnisher.'

Small study comparing children's taste preferences between two varnishes:

[http://ce.compendiumlive.com/pdf/Nov2006\\_CE2.pdf](http://ce.compendiumlive.com/pdf/Nov2006_CE2.pdf)

Note: We recommend that you purchase unit-dose supplies. There are reports that tubes of multi-dose varnish ingredients may separate. Please read the following article, Assessing fluoride concentration uniformity and fluoride release from three varnishes.
